E-waste was sent to CPCB authorized recycler.

## Impact of the pollution control measures taken on conservation of natural resources and consequently on the cost of production.

Captive Power Plants are being operated on environmentally clean technology. The stack emissions from the plant are controlled by ESP's. Bag Filters are installed at various material transfer points to clean the process and arrest the fugitive emissions. The boiler Ash collected in the pollution control equipment is used in the process of existing cement plants, thus it can be said that the utilization of raw material is being done at their cost. Since the system is operated on total recycle, there is no effect on the cost of production.

#### PART - H

## Additional measures/investment proposal for environmental protection including abatement of pollution.

Green belt development and tree plantation is our on-going process. We have planted 296 No's of native species and up to March 2023, 132160 trees have been planted in premises of Unit – I, II, III, CPP – II and colonies.

#### PART -I

#### MISCELLANEOUS:

#### Any other particulars in respect of environmental protection and abatement of pollution.

- We have full-fledged Environment Department with three separate cells, for monitoring, maintenance of pollution control equipment and Green Belt development.
- 2. Monitoring of stack emission and ambient air and water quality is being done regularly.
- Maintenance department is doing regular checking and scheduled maintenance of all the pollution control devices.
- 4. Civil Department is taking care of Housekeeping, water supply and operation of STPs.
- Horticulture Department is taking care of tree plantation and green belt development.Every year we are doing tree plantation.

We are enclosing herewith following documents:-

Annexure – 1:- Stack Emission Monitoring Test Reports

Annexure - 2:- Ambient Air Quality (PM10, PM2.5, NOx and SO2)

Annexure – 3:- Analysis Report of Treated Effluent Waste Water.
